

## CEMENT BULKER

The trailer-mounted cement transporter is built according to ASME section VIII Division 1 and is capable of handling bulk material.

The banana-shaped cement transport trailer hauls 1,060 ft<sup>3</sup> (30 cubic meters) volume in two equal compartments and is designed to perform at a maximum working pressure of 40 psi.

The interior is designed to allow dry material to flow out under airstream pressure to the surge tank or the field silo. Two manways are located on the top of the tank for performing maintenance operations and for top loading of sand.
