

FRAC PUMP

ALGC

ADVANCED LINES GAS COMPANY

A frac pump is a high-pressure, high-volume pump used in hydraulic fracturing treatments. Hydraulic fracturing is a well stimulation technique where fracking liquid (a mixture of mostly water and sand) is injected into rock formations at high-pressures, allowing for the extraction of natural oil and gas. Frac pumps have evolved throughout history to accommodate the increasing demand of pressure pumping services companies around the world as operators are required to push drilling into more complex geological formations to ensure supply.
